DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael Scheinberg on 13 November 2003.

The ABSTRACT of the application has been amended as follows:

A focused particle beam system, according to one embodiment of the invention, precisely shapes a pole-tip assembly formed by a multi-layer device having a first layer with a first structural element, a second layer with a second structural element, and a shielding layer with a shielding element, the shielding element being located between the first layer and the second layer. ~~The focused particle beam system mills the second structural element without irradiating a test structural element.~~ The system images a selected portion of the multi-layer device to locate the shielding element and thereby avoids irradiating the first structural element. ~~The shielding element separates the first structural element from the second structural element.~~ Based on the location of the shielding element, the system images and mills the second structural element without irradiating the first structural element. In this manner, the focused particle beam system mills the second structural element to produce a desired pole-tip configuration. By producing a desired pole-tip configuration, these methods and apparatus produce a recording transducer capable of high storage density.

Allowable Subject Matter

2. Claims 1-5 and 18 are allowed.

Art Unit: 1763

3. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or fairly suggest the apparatus as claimed. Specifically, Lee (the closest piece of prior art) fails to disclose **"a processor programmed to be responsive to said second image signal for generating a milling signal representative of an instruction for applying said focused particle beam to a selected portion of said second structural element for milling said selected portion of said structural element" or "a pattern recognition element programmed for analyzing said first image signal of said portion of said shielding element to determine the location of said portion of said shielding element"**. Additionally, no other piece of prior art provides motivation for the combination of Lee with another piece or prior art to produce the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karla Moore whose telephone number is 703.305.3142. The examiner can normally be reached on Monday-Friday, 8:30am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Mills can be reached on 703.308.1633. The fax phone number for the organization where this application or proceeding is assigned is 703.872.9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703.308.0661.
